

**ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION**  
**Division of Air Quality SITUATION REPORT**

**AIR QUALITY ADVISORY**  
**Aleutian Southwest Alaska #2022-01**

**LOCATION(S) IMPACTED:** Eastern Aleutians, Shelikof Strait and Kodiak Island

**TIME/DATE OF UPDATE:** Saturday, January 1, 2022, 2:00 PM.

**VALID TIME:** Valid until Sunday, January 2, 2022, 7:00 PM.

**TIME/DATE OF THE NEXT REPORT:** If necessary, Sunday, January 2, 2022, 7:00 PM or if conditions change significantly and warrant a timelier advisory.

**ADVISORY:** Very strong northwest winds in the vicinity of Katmai and the Valley of Ten Thousand Smokes are starting to pick up loose volcanic ash erupted during the 1912 Novarupta-Katmai eruption and will carry it to the southeast through Sunday evening. This phenomenon is not the result of recent volcanic activity and occurs during times of high winds and dry snow-free conditions in the Katmai area and other young volcanic areas of Alaska. No eruption is in progress. All of the volcanoes of the Katmai area (Snowy, Griggs, Katmai, Novarupta, Trident, Mageik, Martin) remain at color code GREEN. Should enough ash fall to cover the ground, the possibility of health risks still continues from the ash on the ground any time winds or human activity can cause ash to be re-entrained into the air. People with respiratory conditions should be aware for the potential of ashfall in their area, and to use caution if it is observed.

**VOLCANIC DUST AND PUBLIC IMPACT:** Ashfall restricts visibility and is a general nuisance. Individuals exposed to airborne volcanic ash may experience various eye, nose and throat irritation. Although ash can cause discomfort, short-term breathing of volcanic ash is not known to pose a significant health hazard for healthy individuals. However, exposure to ash can make breathing difficult for infants, the elderly and those with respiratory ailments. People with existing respiratory conditions, such as chronic bronchitis, emphysema and asthma, are more at risk for developing acute respiratory symptoms from breathing volcanic ash. Anyone in these risk groups should be particularly careful to avoid exposure. Contact your health provider if you are concerned about symptoms.

DEC advises everyone to avoid unnecessary exposure to ash. Wear a disposable face mask outdoors to reduce inhalation of ash particles. Dust masks can be purchased at most hardware stores. Masks that seal to the face provide the best protection. Alternatively, a wet cloth or bandana placed over the mouth and nose can help reduce contact.

Contact lens wearers are advised to switch to eye glasses to reduce eye irritation from ash exposure. Wearing goggles can help to protect your eyes and wearing long sleeved shirts as well as gloves may be helpful. Remember that pets are also susceptible to all of these same symptoms, and should be kept indoors or sheltered from ashfall as well.

**FOR MORE INFORMATION:** Please visit the Alaska Volcano Observatory website at <http://www.avo.alaska.edu> ..

For more information on steps to take in the event of ashfall, visit the Department of Environmental Conservation, Air Quality Division, Volcanic Ashfall page at <http://www.dec.state.ak.us/air/volcano.htm>.
